FOZA SURGI treatment chair catalog card

CE

- The FoZa – Surgi treatment chair is used in oral and maxillofacial surgery, dental surgery, ophthalmic surgery and the treatment of AMD - macular degeneration (intravitreal injections) and otolaryngological procedures.
- Thanks to its functionality and additional equipment, it ensures high comfort of the patient's stay.
- The seat height is adjusted using an electric column, covered with an aluminum cover.
- The adjustment of the inclination angles of the backrest segments and the seat and lower leg is performed using electric actuators.
- A headrest is mounted in the backrest segment.
- The headrest of the chair is made of a special polyurethane cast, which stabilizes the patient's head through a special recess.
- The headrest of the chair is adjustable in several planes to exclude the possibility of moving the head during procedures.
- The chair's running gear is equipped with wheels with a central lock, plastic, double wheels. At the back there are 125 mm diameter wheels, while at the front there are 100 mm diameter wheels
- The seat, backrest and lower leg segments are seamlessly upholstered. Each of the three bed segments is separate
- Upholstery adapted for washing and disinfection with standard agents used in healthcare facilities. Phthalate-free upholstery, certified for use in medical facilities, resistant to UV radiation
- The base of the chair, backrest segment, seat segment have covers made of ABS plastic for easy cleaning and disinfection.

- In the seat and backrest segments, the chair has Euro strips that allow the installation of necessary equipment
- Alternatively, instead of polyurethane armrests, the chair can have side rails
- The chair has armrests that recline to the backrest and can be dismantled without the use of tools. Armrests made of a special polyurethane cast
- The chair can be controlled from a wired remote control or foot panel. (foot panel is an option)
- The chair is equipped with a control with an individual program. The system allows you to perform selected functions with one button, such as the starting position, Trendelenburg marked on the remote control in red and programming a favorite position - these options apply to the wired remote control
- The chair is equipped with a battery as standard
- The lower leg segment has handles for rolling the chair
- The remote control for performing electrical functions is located on a special stainless steel handle, mounted on the right or left side of the chair without using tools
- Optionally, the chair can be equipped with a four-hanger drip stand made of stainless steel, mounted on the right or left side of the chair without using tools
- The chair can be equipped with a potential equalization system - optionally

Technical parameters:

Total lenght of the chair FoZa – Surgi	2100 mm
Total width of the chair	875 mm
Width of the lying surface	620 mm
Height adjustment range	595 mm do 970 mm
Angular adjustment of the backrest segment	80°
Adjustment range of Trendelenburg position	0° do 13° (from 1 button) , 0° do 18°
Adjustment range of reverse-Trendelenburg position	3°
Angular adjustment of the lower leg segment	73°
Permissible load	250 kg
Diameter of wheels from leg side	Ø100
Diameter of wheels from head side	Ø 125
Life	10 years
